Version History / Summary of Changes

The Amer Sports Materials Compliance Policy (AS MCP) will evolve with changing regulations and scientific advances. Amer Sports will communicate updates to business partners on an annual basis or ad-hoc in case of urgent changes in regulations. These could include chemical testing thresholds or additional program requirements. Please get in touch with your primary sourcing contact to ensure that you have the most recent version of this document.

Version	Major Change		
First Version (2013)	 Original document published under title "ASO1 Amer Sports Worldwide Restricted Substance List for Control and Monitoring of Hazardous Substances" 		
Update (2019, Version 2.0)	 AS01 replaced by "Amer Sports Materials Compliance Policy" Added testing procedures and section on animal welfare 		
Update (2021, Version 3.0)	 Simplified RSL structure for product categories other than Apparel & Gear Added requirements regarding sandblasting and nanotechnology to Ethical Sourcing Requirements for Apparel & Gear products Reworked penalty provisions for non-compliant materials Rephrased REACH certification 		
Update (2021, Version 4.0)	 Added Transparency to Ethical Sourcing Requirements RSL renewed Testing guidance simplified 		

1 Introduction

Amer Sports implements its business strategy in an ethically, socially and environmentally responsible manner and ensures that its products are innovative and safe. Amer Sports chooses business partners that are committed to fair and sustainable business.

To manage the chemical composition and ethical sourcing of materials used in Amer Sports brands' products and the chemical impacts in product manufacturing, Amer Sports has developed this Materials Compliance Policy. The major contents are:

- Restricted Substance Lists (RSL)
- Manufacturing RSL (MRSL)
- Testing and Certification Requirements
- Ethical sourcing requirements in addition to Chemicals Management

The purpose of this document is to explain the expectations and requirements for materials as well as acceptable verification methods that Amer Sports imposes to its suppliers.

As part of Amer Sports' responsible sourcing strategy, it is worth mentioning that

- Amer Sports has a Social & Labor Monitoring Program in place to ensure working conditions in our factories meet our requirements (see Section 4.6)
- As a full member of the Sustainable Apparel Coalition (SAC), Amer Sports started tracking the
 reduction of the environmental impact of its factories using the Higg Facility and
 Environmental Module (FEM, see Section 4.7). The tracking already started in the softgoods
 area and is planned to be extended gradually to hardgoods wherever possible. Additionally,
 brands like Arc'teryx, Peak Performance and Salomon also employ the Higg Brand Module to
 measure their environmental impact and the Higg Product Module to assess the
 environmental footprint of materials.

Amer Sports requires its suppliers and business partners to study this document very carefully and implement management processes in compliance with these requirements.

Amer Sports expects all its suppliers to be compliant with the Amer Sports Material Compliance Policy.

1.1 Amer Sports Material Compliance in a Nutshell

According to its Material Compliance Policy, Amer Sports requires its business partners to

- Guarantee that materials, components and finished products supplied to Amer Sports or for Amer Sports business are in full compliance with laws and regulations regarding environment and product safety.
- Comply with best practice and industry standards and not intentionally use substances contained in the list of restricted substances (RSL, see Appendix H and Appendix I) in our products.¹

¹ In the future, starting with apparel and footwear, we will also require compliance with ZDHC's or similar list of substances that are restricted in manufacturing processes (Manufacturing RSL (MRSL), see Appendix B).

_

- 3. Improve the environmental impact of supplied materials which means that:
 - a. Materials and components supplied are non-toxic in use, their use to manufacture Amer Sports' products and disposal do not involve toxic releases damaging ecosystems.
 - b. Suppliers strive to choose materials with the least environmental impact wherever possible.
 - c. Suppliers manufacture materials and components under adequate and legally compliant environmental conditions.
- 4. When sourcing materials from animal products, Amer Sports does not accept any unnecessary pain, suffering or injury caused to these animals, whether they are wild or domesticated, i.e. farmed. Additionally, Amer Sports does not source any material from any endangered or threatened species. Section 4.2 explains Amer Sports' requirements regarding animal welfare in detail.

On an annual basis, Amer Sports reviews and updates its Materials Compliance Policy (MCP) and Restricted Substance List (RSL) upon knowledge of applicable laws in different countries and on the expertise of chemical experts. The Amer Sports Material Compliance Policy always takes the strictest standards legislated globally.

Amer Sports has more-ambitious sustainability goals than what is legally required, and thus the Amer Sports (M)RSL contains also additional non-regulated substances which are:

- either prohibited in our finished goods or their use is limited.
- expected that their use will be regulated / limited in the (near) future.

Amer Sports' focus is on whether the substance can be found in the material, component and/or finished good at a certain level and/or in product manufacturing. It is supplier's responsibility to ensure compliance with regulations restricting the use of substances in production processes or in the factory.

Should you have any questions or concerns about this policy, please do not hesitate to contact your Amer Sports contact person or Sustainability Team (see Appendix C for further details).

The Material Compliance Policy is valid for all Amer Sports brands, products and product categories. However, for Apparel products, Amer Sports is a bluesign® system-partner and relies on the bluesign® system including the bluesign® RSL to assess the safety, environmental impacts, and regulatory status of textiles chemicals (see Appendix H for details). Hence, the restricted substances listed in Appendix I of this policy refers to all other products than Apparel.

1.2 Definitions

We use the following terminology throughout this document:

Term	Definition			
Amer Sports	Amer Sports Corporation, Konepajankuja 6, P.O. Box 1000, 00511 Helsinki, Finland			
-	and all its affiliated companies (collectively referred to as Amer Sports)			
Apparel	All kinds of garments incl. headwear and socks (see appendix for further details)			
Article	Object which is given a special shape, surface or design during production and			
	which determines its function to a greater degree than does its chemical			
	composition. It may be produced from natural or synthetic raw materials using			
	individual substances or mixtures.			
AS01 Policy	Previous name of the Amer Sports Material Compliance Policy			
Authorized	Testing laboratory complying with Amer Sports requirements as defined in Section			
testing institute /	Testing Institutes			
laboratory				
Category	Organizational consolidation of multiple brands selling similar products (also			
- Category	referred to as Product Category). Examples: Apparel, Footwear, Winter Sports			
	Equipment, Ball Sports.			
CAS Number	Unique numerical identifiers assigned by the Chemical Abstracts Service to every			
	chemical described in the open scientific literature (currently including those			
	described from 1957 until the present day) and including elements, isotopes,			
	organic and inorganic compounds, ions, organometallics, metals and other			
	individual chemical components.			
Chemical	A chemical element and its compounds with constant composition and properties.			
substance	It is defined by the CAS number			
Complex	A complex object refers to any object made up of more than one article. In			
object	complex objects, several articles can be joined or assembled together in various			
Component	Manners. Article used to produce complex objects			
Component Detection	Lowest quantity of a substance that can be distinguished from the absence of that			
limit	substance following a prescribed analytical method			
Fabric	Article used to produce complex objects			
Finished Good	Complex object that is intended for sale or distribution. Synonym: (Finished)			
	product.			
Hardgoods	Sports equipment such as skis, snowboards, wheels, rackets, golf clubs, watches,			
	dive computers, compasses, etc			
Limit	Maximum concentration of a substance in a material/component or a			
	homogeneous part of a product expressed in mg/kg unless stated otherwise. The			
	maximum amount of chemical substances permitted in articles.			
МСР	Amer Sports Material Compliance Policy defines the chemical composition and			
	ethical sourcing of materials used in our products and the chemical impacts in			
NADCI	product manufacturing.			
MRSL	Manufacturing Restricted Substance List defines concentration limits for			
Material	substances in chemical formulation used within manufacturing facilities. Article used to produce complex chiects			
Material Article used to produce complex objects. Materials and Refers to all complex objects and articles used to make our produce.				
Components	fabrics, trims, modules, etc			
Module	Very complex object made of (or assembled from) complex objects and articles			
	10. 7 complex objects made of (or assembled from) complex objects and affices			

Product	Synonym for a finished good		
Raw Material	Substance or mixture used to make articles		
RSL	Restricted Substance List. It defines		
	restricted and banned substances		
	concentration limits for restricted substances		
	in materials or finished products to comply with laws and regulations and/or to		
	drive sustainability.		
Semi-Finished	Complex object that is to be used to make finished goods and usually not intended		
Good	for sale / distribution. Exceptionally, some semi-finished goods can be sold as		
	spare parts (e.g. buckles, laces, tennis strings, and batteries).		
Several	In the RSL document, several means that the whole substance group is restricted		
	even though not all restricted substances are listed explicitly. The listed examples		
	represent only those substances, which should be considered if substance group		
	is intended for testing		
Softgoods	Apparel products, footwear products, accessories such as bags, caps, beanies, etc.		
	and soft parts of hard goods (examples of soft parts of hardgoods: grip of a golf		
	club, soft parts of ski boot)		
Suppliers	Business partners to which product manufacturing has been outsourced (including		
	finished goods, components and raw materials suppliers). Amer Sports		
	distinguishes its suppliers along the supply chain as follows:		
	T1 suppliers: manufacture finished goods through Amer Sports		
	T2 suppliers: produce materials, components, fabrics, trims, etc		
SVHC	Substances of Very High Concern (SVHC) which are defined in Article 57 of the		
	Regulation (EC) No 1907/2006 (REACH) and include certain substances that may		
	have serious and often irreversible effects on human health and the environment.		
	REACH aims at ensuring that the risks resulting from the use of SVHCs are		
	controlled and that the substances be replaced where possible. Amer Sports		
	expects its suppliers to adhere to communication guidelines of Article 33 of the REACH Regulation.		
Test methods	Best industry practice test methods or test methods as defined by regulations. Test		
rest methods	methods are subject to permanent change and shall always be checked with Amer		
	Sports.		
Traces	Technical impurities of a substance subject to a usage ban which cannot be		
liuces	avoided technically. Depending on the type of substance and its related		
	manufacturing processes, trace limits may be different in chemical industry and		
	downstream user industry but shall always ensure safety for consumers and		
	environment based on available scientific data.		
Trim	Article used to produce complex objects		
Usage ban	Prohibition of the intentional use of a substance during any stage of production of		
	a product. Chemical products (e.g. colorants or textile auxiliaries) used for		
	manufacturing of articles must not intentionally contain these substances or		
	substance groups. Aim: avoid release of harmful substances to the environment		
	and to occurrence in the manufactured product by applying the precautionary		
	principle		
Usage range	Classification of consumer goods according to their consumer safety relevance:		
	 Usage Range A: Next to skin use and baby articles (0 to 3 years) 		
	Usage Range B: Occasional skin contact		
	Usage Range C: No skin contact		

1.3 Notes

As chemical names may vary, it is the supplier's responsibility to always verify synonyms of any chemical as referenced in the RSL. Amer Sports RSL is based on known and applicable standards at the time of publication, any inaccuracy or omission is not the responsibility of Amer Sports.

Amer Sports MCP requirements reflect national laws and regulations of countries where we sell products (see Appendix A for the most common laws and regulations). Another purpose of the MCP is to drive sustainability. We expect all our suppliers to be fully compliant with our MCP.

Detection limit as indicated in the RSL may vary depending on the current state of the art of analytical methods.

Indication of the relevance of a substance for hardgoods, softgoods and materials are disclosed to suppliers for information purpose only and based on limited knowledge of Amer Sports on suppliers' manufacturing process. It is the supplier's responsibility to always check the relevance of a substance for the products he is delivering to Amer Sports.

This MCP document applies to all suppliers of all Amer Sports brands without any exceptions.

2 General / Liabilities and Responsibilities

2.1 General

The Material Compliance Policy herein completely replaces all current existing policies for control and monitoring of hazardous substances that were valid previously. All production for Amer Sports must comply with these requirements. This also applies to all items that are intended to be sold or distributed as free-of-charge.

2.2 Liabilities and Responsibilities

Suppliers have to acknowledge receipt and agree to comply with Amer Sports MCP requirements and Amer Sports Ethical Policy². Any failure in complying with these requirements will result in a business review and may result to the removal of the supplier or factory from the approved supplier list. Amer Sports reserves the right to terminate the business relations with partners in such cases.

At the request of Amer Sports, suppliers shall promptly provide samples of any pre-produced, un-/semi-finished or finished product. The supplier shall also allow or, as the case may be, procure permission for an authorized representative of Amer Sports to inspect, any premises of supplier or any subcontractor where any products (or packaging for them) are developed, manufactured or stored at any time during normal business hours and on reasonable notice. The authorized representative of Amer Sports may take samples of the products or materials during such inspections.

Material and components suppliers have to ensure that the materials or components shipped to finished good suppliers or Amer Sports' entities comply with Amer Sports MCP requirements.

These suppliers must ensure that materials and components are

- compliant with applicable rules, regulations and standards
- tested according to Amer Sports testing requirements (see Section 3).

Therefore, the supplier should be ready to present applicable certificate / test reports of the materials and components whenever Amer Sports asks for them. If certificates / test reports are not available, Amer Sports reserves the right to execute the non-compliance penalties specified in Section 3.5.

Suppliers will be held liable for all loss and damage suffered by Amer Sports, its distributors or agents due to non-compliant substances found in any of the materials, components or products supplied during times for which a certificate exists.

Amer Sports actively encourages all business partners to maintain a current knowledge of regulatory changes to make sure Amer Sports' products comply with all applicable international legal requirements. Should suppliers become aware of any new laws or regulations applicable to the products they manufacture, they shall proactively inform Amer Sports to enable updates of Amer Sports RSL.

² See https://www.amersports.com/sustainability/guidelines-and-policies for the latest versions of the Ethical Policy.

-

Each supplier of Amer Sports products, components or materials used for the manufacture of Amer Sports products shall represent and warrant that each of its deliverables (whether finished products, components or materials including packaging) complies with all provisions of the MCP/RSL herein.

Supplier shall hold Amer Sports harmless and indemnify Amer Sports from any claim, loss, damage or other detrimental consequence, resulting from any supplier's non-compliance.

Amer Sports requires all suppliers to certify their compliance to the Amer Sports Material Compliance Policy by executing Supplier MCP certificate of compliance (Appendix D) and REACH certificate of compliance (Appendix E) and sending it to its respective Amer Sports office if requested (see contacts in Appendix C).

Suunto collects REACH compliance evidence as part of full material declaration process (see further explanation in Appendix F).

2.3 Validity Periods

Unless specifically mentioned, this Materials Compliance Policy (MCP) and the included RSL/MRSL are effective for all development, design and production and for all products, components and materials delivered to Amer Sports as of 01-Oct-2021. The policy is valid until further notice or replacement.

Amer Sports updates MCP and RSL periodically and reserves the right to update MCP and/or product category specific RSL/MRSL contents at any time. Amer Sports will notify its suppliers about forthcoming changes in due course.

3 Material Compliance Testing

All suppliers providing products to Amer Sports brands are required to:

- Comply with the usage bans and detection limits specified in the RSL;
- Provide test results from a third-party accredited test laboratory or agency, or evidence of compliance upon request at their own expense; and
- Notify Amer Sports of any non-compliant materials.

Suunto verifies substance compliance by collecting full material declarations from suppliers (see further explanations in Appendix F).

3.1 General Procedure

Amer Sports will communicate the testing requirements for each category of products to suppliers. The tests specified in these testing requirements are mandatory.

The requirements in Appendix H and Appendix I provide limits for restricted substances and guidance on material and components testing for softgoods, hardgoods. Appendix J lists examples of products and materials for all Amer Sports product categories. These tables are not intended to replace Amer Sports specific requirements notably regarding CPSIA compliance with respect to lead in paint and lead in products or any other Amer Sports specific testing requirements. Their intent is to assist suppliers in their testing and chemical compliance programs but they shall not release suppliers from their duty to supply Amer Sports products "free from hazardous substances".

Suppliers shall be fully responsible for obtaining all necessary knowledge and implementing internal management in order to ensure RSL compliance.

All costs associated with testing of materials and components are the responsibility of suppliers, unless otherwise stated in written by Amer Sports.

3.2 Testing Procedures

Amer Sports runs its operations by product categories. Three of these categories, Apparel, Footwear and Suunto have created respective testing procedures.

3.2.1 General

CPSIA³ is valid for all products sold in the United States of America. Any product-specific testing requirement does not affect the validity of this regulation.

3.2.2 Apparel

For T2 suppliers that provide materials and components to T1 suppliers to manufacture apparel and gear products, Amer Sports has compiled the testing procedures and requirements in respective manuals.

³ US Consumer Product Safety Improvement Act, see https://www.cpsc.gov/Regulations-Laws--Standards/Statutes/The-Consumer-Product-Safety-Improvement-Act

These manuals generally separate between testing requirements during the individual stages of the product lifecycle: development, salesmen samples and bulk production. The documents can be obtained from your Amer Sports material compliance managers (see Appendix C).

3.2.3 Footwear

Footwear requires T2 suppliers to provide a valid test certificate for the first shipment to T1 suppliers. These test certificates are valid for 13 months since generally, Amer Sports renews its RSL for footwear products on an annual basis. Additionally, the Amer Sports Footwear category reserves the right to conduct random material compliance tests for materials and components or finished goods at any time.

The detailed instructions on footwear testing procedures can be obtained from the material compliance contact for footwear (see Appendix C).

3.2.4 Suunto

Suunto may require testing in situations where the supplier is not able to provide adequate data for verifying compliance (see further explanations on Full Material Declaration in Appendix F).

3.3 Test Reports

Any analysis carried out by an authorized testing laboratory shall be covered by a report which accurately, clearly and unambiguously presents the test results and other relevant information.

All test reports should include material information as follows:

- Name and address of testing institute(s) involved in the analysis, current accreditation number
 of the laboratory and identification of the national organism which has accredited the
 laboratory according to ISO Standard ISO/IEC 17025.
- Unique identification system of the report (such as serial number) which shall be marked on each page of the report
- Supplier name, address & contact person
- Material / product name & code
- Material / product color (name & code)
- Material composition
- Date of receipt of the product and date of performance of test
- Hazardous substances, for which the material/product has been tested for, detection or reporting limit and corresponding test results
- Test methods used for testing and respective pre-treatment: reference to international standards (ISO / JIS / IEC / CPSC /DIN / ...), used procedure (including digestion methods and test instruments if any)
- Results shall be expressed in SI units according to ISO 1000 standard (ICS 01 060) as milligrams / kilogram ("mg/kg") in samples tested and according to reference standard method.
- Results shall also include results from all quality assurance and quality control (QA/QC) tests, including results from blank test, and a list of reference materials used and their origin. Any details not specified in the reference standard which are optional, and any other factors potentially affecting the results shall also be communicated in the test reports. Any deviation, by agreement or otherwise, from the test procedure shall be specified.

Any corrections or additions to a test report after its issue shall be made only in a further document suitably marked, e.g. "Amendment/Addendum to test report serial number (or as otherwise identified)", and shall meet the relevant requirements of the preceding paragraphs.

3.4 Testing Institutes

Testing Institutes / Accredited Third Party Assessment Body/third party laboratory must conduct testing according to specified testing procedures

All testing institutes must:

- Be accredited to ISO Standard ISO/IEC 17025 entitled "General Requirements for the Competence of Testing and Calibration Laboratories" by national bodies recognized by ILAC (International Laboratory Accreditation Cooperation) or IAF (International Accreditation Forum);
- 2. Work according to internationally accepted quality control standards incl. gage calibration and therefore use appropriate validation procedures;
- Apply for acceptance and registration with the U.S. Consumer Products Safety Commission ("CPSC") by submitting a true copy of the accreditation and scope documents demonstrating compliance;
- 4. Comply with US Consumer Product Safety Improvement Act requirements in order to be considered an Accredited Third Party Assessment Body as detailed in Section 7.7 of the CPSIA guidelines.

Any other testing institutes which have been officially accredited and certified in accordance with ISO/IEC 17025 also can be used for testing. In this case, certificates of the testing institute should be sent to the Amer Sports Testing or Quality Manager or material compliance contact (see Appendix C).

The list of testing institutes accepted by Amer Sports can be obtained from Amer Sports category specific material compliance contacts.

3.4.1 Conflicting results between testing institutes

If there are conflicts due to different results from institutes, even though the supplier declared the materials were from the same source, Amer Sports will take a further sample for testing it in a neutral testing institute for further decision.

The test then should also provide information about the reason for the contamination, the raw material or facts during the production.

3.4.2 Exceptional exemption from using external testing institutes

Material suppliers who want to be exempted from delivering test reports issued by external testing institutes but from their own in-house testing lab need to meet the following conditions:

- Suppliers have to be certified in accordance with quality management standards ISO 9001.
- Suppliers have to operate their own material testing laboratory.
- Testing lab has to be certified in accordance with ISO/IEC 17025.

Official certificates confirming the compliance with these conditions shall be sent to the responsible Amer Sports material manager and the factory. In case of compliance, test reports issued by the

Supplier / Supplier lab shall be sent to the factory once a year and to be accepted by them, copy to the in-charged Amer Sports Office if requested.

3.5 Penalties for Non-Compliance

If any material is found to be non-compliant with the RSL, Amer Sports generally requires to put the respective materials under quarantine and requires suppliers to produce replacements at suppliers' expenses. The general procedure is as follows:

- 1. STOP PRODUCTION
- 2. QUARANTINE non-compliant materials will be quarantined
- 3. **COMPLIANT ALTERNATIVE** a compliant alternative will be found
- **4. REPLACEMENT** a replacement product (or material or component) will be produced (at suppliers' expense). Field replacement may also include labor and shipping charges.

Suppliers shall inform their Amer Sports material compliance contact (see Appendix C) in due course about non-compliances. Material compliance contacts will analyze which products and which suppliers are affected and how to further use, destroy or dispose non-compliant materials. Further details can be found in the testing procedures by category (see Section 3.6).

Continued missing or failure reports from the supplier will lead to a review of the business relationship and withdrawal from the Amer Sports supplier portfolio.

3.6 Material Compliance Audits

Amer Sports will audit suppliers to ensure compliance with the RSL. Any supplier who fails to provide evidence of compliance may be subject to the penalties above. Depending on the structure of manufacturing process, specific material compliance audit procedures are defined for each product category.

Amer Sports reserves the right to perform random tests by itself or by its authorized representatives at any time. Quantities/frequency of random tests on materials and products is up to the decision of Amer Sports.

4 Ethical Sourcing Requirements in addition to Chemicals Management

Amer Sports is committed to ethical sourcing practices. In addition to Chemical Management, Amer Sports imposes requirements regarding the source of materials and the conditions under which materials are produced or extracted.

4.1 Conflict Minerals

Conflict minerals are natural resources extract in conflict zones to finance (military) disputes. The most commonly mined conflict minerals are

- Tin
- Tungsten
- Tantalum
- Gold
- Cobalt

Amer Sports does not ban these materials in general. However, Amer Sports expects suppliers to conduct due diligence for materials extracted in Western Congo and other possible conflict-affected and high-risk areas to assure origin from smelters and refiners that are certified through e.g. the Responsible Minerals Assurance Process.

Since conflict minerals refer to a combination of a substance and its source (factory, smelter, or refiner), our RSL does not contain conflict minerals as such. Instead, our RSL lists prohibited substances irrespective of their origin of manufacturing / extraction.

4.2 Animal Welfare

Amer Sports brands require suppliers of animal-based materials to respect animal welfare and work towards traceability and responsibly sourced materials.

In its products Amer Sports will accept only:

- Leather or leather parts that originates solely from animals which have been used for meat production; and
- Wool or wool parts that originate solely from sheep which have not been subject to mulesing
- Down and feather that has been plucked from birds that are already dead, bred and slaughtered primarily for meat production.

Amer Sports' suppliers shall **not** use plants or animal materials identified by the

- Convention on International Trade in Endangered Species of Wild Fauna and Flora (CITES⁴)
- International Union for Conservation of Nature (IUCN⁵)

or any type of animal fur in manufacturing processes.

⁵ http://www.iucnredlist.org/

Amer Sports Material Compliance Policy – v4.01

⁴ See http://www.cites.org/eng/disc/species.php

Table 1 outlines the minimum requirements for down, leather, and wool across all Amer Sports product categories / brands and the certificates that have to be provided prior bulk production.

Table 1: Animal Welfare Material Requirements

	Amer Sports Minimum Requirements		
Down	No live-pluckingNo force-feeding		
Wool	Originates from sheep not subject to mulesing		
Leather / Fur	 Peak Performance does not accept any fur or leather from animal origin All other brands require that leather and fur originate solely from animals used for meat production 		

Amer Sports also expects its suppliers of animal-based materials to respect the five animal freedoms⁶. This sourcing practice is one of the key prerequisites in obtaining certificates according to the Responsible Down / Wool Standards.

For down, wool and leather, Amer Sports Apparel and Footwear suppliers must provide the certificates specified in **Table 2**. Amer Sports encourages suppliers of all other brands to follow these standards too.

Table 2: Required Certificates for Down, Wool and Leather

Standard	Certification Requirements	
Responsible Down Standard (RDS)	Applicable to Arc'teryx and Peak Performance Apparel products	
Responsible Wool Standard (RWS)	Applicable to Arc'teryx and Peak Performance Apparel products	
Leather Working Group (LWG)	Applicable to Arc'teryx Apparel products Applicable to Salomon and Arc'teryx Footwear	

All above-mentioned ethical principles also apply to mohair wool sourced from Angora sheep. Amer Sports will require suppliers to adhere to Textile Exchange's forthcoming mohair standard once available and accepts comparable standards until further notice. Additionally, Amer Sports prohibits the use of exotic leather.

⁶ (1) freedom from hunger and thirst; (2) freedom from discomfort; (3) freedom from pain, injury or disease; (4) freedom to express normal behavior; (5) freedom from fear and distress.

_

4.3 Wood and Timber

As far as sourcing of wood and timber is concerned, Amer Sports is fully committed to compliance with the U.S. Lacey Act that has two major components:

- A ban on trading plants or plant products taken in violation of the laws or regulations of the country from which they are sourced.
- A requirement to declare the scientific name, value, quantity, and country of harvest origin for some products.

For further details, see original publication⁷ from the United States Department of Agriculture.

Particleboard and plywood suppliers are required to be compliant to CARB and TSCA Title VI. Additionally, we encourage our suppliers to follow internationally recognized wood and timber standards like FSC, PEFC and the EU Timber Regulation.

4.4 Sandblasting

Amer Sports does not accept sandblasting as a production method for Apparel products to protect health and safety of workers across the apparel industry.

4.5 Nanotechnology

According to International Organization for Standardization's definition that has been adopted by the EU through the Commission Recommendation of 18 October 2011 on the definition of nanomaterial (2011/696/EU), a nanomaterial is defined as a "material with any external dimensions in the nanoscale or having internal structure or surface structure in the nanoscale. The term nanoscale is defined as size range from approximately 1 nm to 100 nm"⁸.9

Due to the uncertainty of risk associated with using nanomaterials and to ensure that any potentially negative impacts to consumers and the environment related with the use of nanomaterials are minimized or ideally totally mitigated, Amer Sports currently requires the application of nanomaterials within all its Apparel products to be evaluated and approved prior use. This requirement applies to final products and/or components where nanomaterials are intentionally applied to or remains as residuals after manufacturing.

Prior to the use of nanomaterials in a specific Amer Sports products or any of its components/materials, the following criteria must be met

- Comply with legislations
- Disclose the reason for using nanomaterials
- Disclose detailed technical information on nanomaterials intended to be used by filling out the questionnaire listed in Appendix G

⁹ As one nanometer is one-billionth of a meter, nanomaterials are 10 times smaller than the diameter of a human hair.

⁷ See https://forestlegality.org/policy/us-lacey-act

⁸ See https://eur-lex.europa.eu/legal-content/EN/TXT/?uri=CELEX:32011H0696

Based on the information provided, Amer Sports will conduct a risk and toxicity review prior approval. If suppliers do not provide the required information the specific case will be considered as high risk and hence not be approved.

4.6 Fair and Safe Supply Chain

Amer Sports is dedicated to continuously improving its performance regarding labor, workplace conditions and environmental issues in its supply chain. The company aims to engage in business only with companies that meet its standards for ethical operations, and comply with the applicable laws and regulations for labor, workplace conditions and environmental compliance, as defined in the Amer Sports' Ethical Policy.

Amer Sports requires suppliers to be committed to its Ethical Policy which is reviewed and updated through various cooperations with major stakeholders (e.g. Non-Governmental Organizations). The Ethical Policy is embedded into the supplier agreement which suppliers have to sign prior doing business with Amer Sports.

As part of the Social and Labor Program, Amer Sports conducts third-party audits to help sourcing partners comply with industry standards, regulations, and Amer Sports' expectations with regards to health and safety, as well as its environmental and social responsibility.

Amer Sports employs audit results to drive continuous improvement and to derive strategic vendor development plans. For further details and the latest versions of the above-mentioned policies can be found on the Amer Sports extranet¹⁰.

4.7 Environmental Management

Amer Sports reviews its global production and sourcing footprint to identify possibilities for improvements and to reduce its environmental impact.

To guide its Group-wide actions, Amer Sports has created environmental guidelines to outline the commitment to reduce the environmental impacts of its operations through the use of methods that are both responsible and economically sound. In addition, Amer Sports brands are responsible for their environmental actions, based on the common environmental guidelines.

Amer Sports is a member of the Sustainable Apparel Coalition (SAC) and use the Higg Index to measure progress on environmental impact within its supply chain. Amer Sports employs the Higg Facility and Environmental Module (FEM) as a self-assessment tool to measure suppliers' environmental impacts and identify areas for improvement. The goal is to fully integrate these worldwide-recognized tools into the everyday business of the brands but also to extend these tools to

- social and labor aspects and material sustainability
- other product categories than those ones originally in scope of SAC.

See Amer Sports extranet for further details¹¹. Amer Sports already applies Higg FEM for softgoods and extends the approach gradually to hardgoods where possible.

¹¹ See https://www.amersports.com/sustainability/environment/

_

¹⁰ See https://www.amersports.com/sustainability/social/

4.8 Transparency

As Amer Sports is committed to improve working conditions and mitigate environmental impact in its entire supply chain, upon request, Amer Sports suppliers shall disclose the factories and upstream suppliers which contribute to the manufacturing of Amer Sports finished goods, materials or components.

Amer Sports will use this information to drive continuous improvement in its supply chain. Amer Sports will disclose the information to applicable regulators and governmental bodies whenever required. Amer Sports shall not disclose this information publicly without prior approval of its suppliers.

Appendix A. Major Laws and Regulations

For better understanding, we have included the official regulations related to each of the substances asked to be tested. The main ones are listed below:

• EU REACH Regulation:

Registration, Evaluation, Authorization, and Restriction of Chemical Substances (REACH) is a European regulation regarding safe use of chemicals. The European Chemical Agency (ECHA) maintains a list of Substances of Very High Concern (SVHC). Suppliers must be aware of the SVHC list as it grows and changes. You will be able to find the list of SVHC on ECHA's REACH website.

• EU POP Regulation:

Persistent Organic Pollutants (POPs) are not easily biodegradable in the environment. They bio-accumulate through the food chain and pose a risk to human health and the environment. These substances are transported far from their sources, beyond national boundaries (transboundary pollution), even in areas where they have never been produced or used. The European Union POP regulation's objective is to take measures to eliminate or/and reduce the waste of POPs in the environment.

Note: when a substance is being added on the POP list its correspondent entrance will be removed from REACH.

• California Proposition 65 (CP65):

California Proposition 65 requires a warning label on products if the concentration of chemicals listed in this legislation (see https://oehha.ca.gov/proposition-65/proposition-65-list) exceed certain risk-based health limits. These limits are referred to as safe harbor levels and can be accessed via https://oehha.ca.gov/proposition-65/general-info/current-proposition-65-no-significant-risk-levels-nsrls-maximum. Phthalates, Formaldehydes, Flame-Retardants, and the Heavy Metals Lead and Cadmium are high-risk substances listed in CP65. Since these substances are potentially contained in our products we also have included them in our RSL (see Appendix). In general, Amer Sports requires suppliers to be compliant to California Proposition 65. If suppliers detect substances listed in CP65 in our products or materials/components to manufacture our products, suppliers are urged to contact Amer Sports so we can replace these substances prior market introduction or add a CP65-compliant warning label to these products.

We have added the most significant/risky materials to our RSL.

• Washington State: Children's Safe Products Act:

The US State of Washington's Children's Safe Product Act (WA CSPA) is a toxics reporting regulation. The Washington State Department of Ecology maintains a list of Chemicals of High Concern to Children (CHCC). Suppliers must be aware of the CHCC list as it grows and changes. A current list of CHCCs is posted on the Washington State of Department of Ecology's CSPA website.

Appendix B. Manufacturing RSL

To eliminate hazardous chemicals out of products and processes and promote safer alternatives, in the future, starting with apparel and footwear, we will adopt the Manufacturing Restricted Substances List (Manufacturing RSL (MRSL)) which referring to the MRSL developed by ZDHC or similar list.

The MRSL addresses hazardous substances are potentially used, discharged into environment and workers may be exposed during manufacturing process, it does not replace RSL and should be communicated to raw material suppliers.

The MRSL applies to chemicals used in finished goods manufacturing processes facilities, should be no intentional use the MRSL substances in facilities in the production.

There are different measures and tools of finding MRSL compliant formulations. The bluesign® bluefinder is one of the tools, a web-based search engine to help textile manufacturers find bluesign® approved chemical products which can be a support in sourcing MRSL compliant formulations.

For more details of ZDHC MRSL, please refer to https://mrsl.roadmaptozero.com/.

Appendix E. REACH Certificate of Compliance

We hereby certify that the products shipped to Amer Sports or any of their affiliates, agents and distributors or Amer Sports suppliers with effect from ______ (the "Effective Date", dd/mm/yyyy) are compliant with the EU REACH, (Regulation (EC) No 1907/2006 of the European Parliament and of the Council of 18 December 2006 concerning the Registration, Evaluation, Authorization and Restriction of Chemicals) regulation entered into force on June 1, 2007 which applies to chemicals manufactured in the EU/EEA or being imported into the EU/EEA.

We understand and agree that compliance with REACH regulation is a condition to every purchase order of Amer Sports.

We certify that we do not directly import chemicals (either as substances or preparations of substances) to the EU/EEA. All products and packaging delivered to Amer Sports are exclusively defined as articles as defined by REACH Article 3.3 and the European Chemicals Agency (ECHA) guidance material. Given those conditions products delivered to Amer Sports are exempt from REACH registration activities as substances or substances in preparations.

Further, we represent that products delivered to Amer Sports are articles that are not designed to release any substance under normal and reasonably predictable application scenarios during their lifecycle. Substances in Amer Sports products are thus exempted from registration under Article 7.1.

The candidate list of Substances of Very High Concern (SVHC) that are candidates for authorization to be considered is the latest updated version available on ECHA website (https://echa.europa.eu/candidate-list-table).

We understand that more substances shall be included regularly to this SVHC by the European Chemicals Agency and that it is our responsibility to always check the relevance of a substance for the products we are delivering to Amer Sports.

We certify that products and packaging delivered to Amer Sports meet the REACH Compliance requirements as defined by European Community Regulation (EC) 1907/2006. In case, for selected high-risk substances, Amer Sports has imposed stricter limits compared to REACH, we confirm to adhere to these limits as specified in the respective RSLs (see Appendix H and Appendix I).

We hereby represent to communicate the REACH requirements to suppliers of raw materials, components, substances and/or preparations used in Amer Sports products so that Amer Sports or any subsidiary can report information regarding Amer Sports products when required by the EU regulations/authorities and be in compliance with the REACH regulation. We will continue to assess and monitor substances in our components and products in order to assure compliance with REACH. Should any of the substances contained within our products or components and that can be found in a concentration higher than 0.1% weight/weight per component in the future be included in the candidate list or later on in the Annex XIV, we will in accordance with Article 33 to communicate with Amer Sports about the alternative plans.

We understand that the purpose of this certificate is to provide authorities, distributors and retailers with consistent information regarding management of Amer Sports product compliance with the REACH regulation.

We understand and agree that Amer Sports reserves the right but has not the obligation, to test any ordered finished product, material or component at any time and/or any stage of production.

We agree to keep available for at least ten years from the delivery of every Amer Sports purchase order all information regarding substances used for the manufacture of Amer Sports' orders.

We agree to be held liable, indemnify and hold harmless Amer Sports against all and any claims, losses, liabilities, expenses and damages, including reasonable attorney fees and costs sustained by Amer Sports or any of their affiliates, agents, distributors caused by our failure to comply with the European REACH regulation.

The undersigned is an owner, director, officer or otherwise authorized to agree to and sign this certificate on behalf of the company below.

To be sent to the appropriate Amer Sports contact person as specified in Appendix C and the Vendor Sustainability Team.

Appendix F. Suunto Full Material Declaration

Full Material Declaration (FMD)

Verification of restricted substances have traditionally been done with testing. Testing is an expensive and time-consuming way to do the verification and challenging to manage, especially for electronic products with complex structures and high number of components. Thus, Suunto has decided to start collecting Full Material Declarations of all components used in its products.

The Full Material Declaration of a component is the chemical recipe of the component. It lists all substances the component consists of. With this data it is possible to verify the compliance against applicable requirements of the RSL. The data can also be used as a risk management tool and we can assess compliance prior to new regulations.

With this approach Suunto and partners in the supply chain are better prepared for changes in regulations and able to ensure compliance on all levels. Suppliers' burden of verification reduces by providing Full Material Declarations especially for complex regulations e.g. California Proposition 65 and EU REACH.

Full Material Data Collection

Suunto has authorized GreenSoft Technology, Inc. to collect Full Material Data for the components used in Suunto products. Suunto suppliers will be contacted by GreenSoft Technology, Inc. for the collection of data. The data will be kept up to date during the life cycle of the product which means that suppliers will be asked for updates.

Suunto suppliers will be requested to deliver following data by GreenSoft:

- Full Material Disclosure (FMD)
- RoHS 2(2015/863/EU and 2011/65/EU) Certificate of Compliance (CoC)
- REACH Declaration including SVHC substances

Testing

In situations when supplier is unable to provide above mentioned data and information Suunto might require testing of the component(s) according to the test methods specified in RSL.

Appendix G. Risk Assessment of Nanomaterials

Suppliers of products that may contain nanomaterials shall provide this questionnaire. See Section 4.5 for the definition of nanomaterials.

Introduction

Please provide as detailed answers as possible using all of your available information for each endpoint section below. Please write your answers per endpoint on a separate document which you enclose.

If there is no information available, please indicate with (X) below.

If the endpoint is irrelevant, please indicate with (X) below and provide a written explanation in the "comments" column regarding why this particular endpoint is irrelevant.

Characteristics of Nano-Sized Materials

Nanomaterial Information / Identification	No data available	Irrelevant	Comments
Nanomaterial name			
CAS Number			
Structural formula/molecular structure			
Composition of Nano material (including degree			
of purity, known impurities or additives)			
Basic morphology			
Description of surface chemistry (e.g. coating,			
modification)			
Major commercial uses			
Known catalytic activity			
Method of production (e.g. precipitation, gas			
phase)			
Other relevant identification data			

Nanomaterial Information / Identification	No data available	Irrelevant	Comments
Agglomeration/ aggregation			
Water solubility/ Dispersibility			
Crystalline phase			
Dustiness			
Crystallite size

Appendix H. Amer Sports Restricted Substance List for Apparel

Amer Sports is a bluesign system partner and uses the bluesign RSL for its Apparel products apart from Peak Performance. Please refer to

- the original bluesign website¹² for the latest RSL version for all Apparel brands apart from Peak Performance
- Peak Performance website¹³ for their latest RSL version
- the material testing matrix listed subsequently.

To satisfy Amer Sports requirements, suppliers shall test for higher risk chemicals in materials. Lower risk chemicals are recommended for additional testing and may be required at brands' discretion.

The Testing Matrix indicates the following color codes:

¹³ See Peak Performance website https://admin-emea.peakperformance.com/media/wysiwyg/Peak Performance Restricted Substance List 2021.pdf

1	1 : Higher Risk. Testing strongly recommended
2	2 : Lower Risk. Testing recommended
	Blank : Substances or group of substances with high probability not releva

Note

- *: PVC is prohibited to use in all Amer Sports footwear, packaging and food contact products. In addition, Amer Sports prefers all products do not contain PVC and supports efforts to phase-out PVC.
- A: For dyed/colored materials
- B: Crystal is exempted
- C: Metallic coating part on polymers (usually on ABS), accelerated wear and corrosion test is not required
- D: If Flame Retardant use or contamination is suspected.
- E: If a Fluorinated finish is applied. (e.g. DWR or non-stick coating)
- F: Dark color polymeric materials.
- G: Paper, Cork
- H: Whenever a product does have a fungizide application
- J: For PU
- K: For PU based materials.
- L: For Desiccant, Silica gel
- M: For Poly bags
- N: For soft polymeric, coating materials

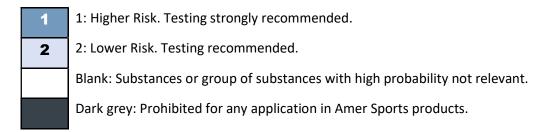

Appendix I. Amer Sports Restricted Substance List for Products other than Apparel

For all other products than Apparel, Amer Sports partnered with laboratories and experts to define the Restricted Substance List which consists of two parts as follows:

- 1. <u>Restricted Substance List:</u> List of individual restricted substances that are banned or restricted in Amer Sports' non-apparel products. Limit values are derived from laws and regulations in individual countries or by Amer Sports sustainability goals whichever is most rigid.
- 2. <u>Testing Matrix:</u> The recommended testing approach that needs to be applied to materials or finished goods, incl. required limit values and recommended testing methods.

To satisfy Amer Sports requirements, suppliers shall test for higher risk chemicals in materials. Lower risk chemicals are recommended for additional testing and may be required at brands' discretion.

The Testing Matrix indicates the following color codes:

1 : Higher Risk. Testing strongly recommended 2 : Lower Risk. Testing recommended

Blank : Substances or group of substances with high probability not relevant

Dark grey: Prohibited for any application in Amer Sports products

- *: PVC is prohibited to use in all Amer Sports footwear, packaging and food contact products. In addition, Amer Sports prefers all products do not contain PVC and supports efforts to phase-out PVC.
- A: For dyed/colored materials
- B: Crystal is exempted
- C: Metallic coating part on polymers (usually on ABS), accelerated wear and corrosion test is not required
- D: If Flame Retardant use or contamination is suspected.
- E: If a Fluorinated finish is applied. (e.g. DWR or non-stick coating)
- F: Dark color polymeric materials.
- G: Paper, Cork
- H: Whenever a product does have a fungizide application
- J: For PU
- K: For PU based materials.
- L: For Desiccant, Silica gel
- M: For Poly bags
 N: For soft polymeric, coating materials

Appendix J. Guidance on products and materials corresponding to Restricted Substance List

For guidance purposes, Amer Sports provides examples of products and materials to which the Amer Sports RSL is applied, including but not limited to those listed in Annex J. as follows:
